Summary

Attraction to web development started at a young age for me. Out of curiosity, I sat down with my peers to observe them as they worked on their personal developmental projects. Over the years, that curiosity transitioned into learning basic programming from experienced family members. The little victories that came from practicing coding ultimately resulted in my decision to end my pre-medical journey and pursue software engineering as a full-time career.

Education

Grand-Circus Front End Bootcamp   01/2020 – 03/2020
